

Saguatti knob lands on the Isola (Island).

Isola is the new way to equip the door, through an elegant and essential design for a touch of freshness on your frames. Isola can be applied easily and it allows for mounting Saguatti knobs even on very thin vertical doorposts. On the Isola you can mount all Saguatti knobs choosing from many colours matchings. Isola is patented. Land on the Isola, another great idea from Saguatti.

Installation Tips

Installing Isola is very simple: at first, you only have to screw the base of the island on the door using the self-tapping screws provided.

For thin doorposts you can use 4 screws (pic. 1) otherwise, in case of an even thinner doorpost, just the 3 external screws (pic. 2).

If the doorposts are wide enough you can open the two blind holes of the island and using 4 screws (pic. 3). You can easily open the blind holes using a bradawl and an hammer.

Once the base is mounted, you have to add the covering plate and screw the knob washer using two self-tapping screws provided (pic.4).

Use "A" holes (pic. 5) for mounting nylon and stainless steel knobs, with 70 mm. head diameter and 60 mm. base-diameter.

Use "B" holes (pic. 5) for all the other knobs with 80 mm. head diameter and 70 mm. base-diameter.

Lastly, the "C" holes (pic. 5) allow to fix, in a classy look version, 80 mm. diameter knobs in an off-center position to the side of the island.

installation using "B" holes

installation using "C" holes

In case of an opposing installation (outside-inside of the door) it is possible to use the through screws provided inserting them in two holes of the island adding the self-tapping screws to obtain a perfect locking.
