

# No through screws,

# cover nuts

# or external screws.

# That's why

# Saguatti Knob

# is more intelligent.

Saguatti solves, thanks to an innovative patented technical solution, the problem of fixing door knobs. Our fixture system is a decisive step forward for door accessories. With Saguatti system, unsightly elements are eliminated, and knob fixing becomes easier and simpler. Through screws, covers, external screws are no more needed, considerably improving the overall look of the knob. This solution is also important for thick security doors. Saguatti knob can be fixed on any door, unlike other knobs which can not be mounted everywhere or, at best, are not convincingly secure.

1) The nylon rosette (A) is fixed to the door by means of screws.

2) The knob (B), provided with a nylon base is screwed on the rosette A.

The tabs (C) lock the knob by acting on its teeth. When the knob has to be replaced due to wear, aesthetic purposes or the like, it is enough to break the tabs applying a sufficient force.
